I – INTRODUCTION

A. RISK FACTORS

1. STANDARD RISK FACTORS:

- a) Mutual Funds and securities investments are subject to market risks such as trading volumes, settlement risk, liquidity risk and default risk including the possible loss of principal and there is no assurance or guarantee that the objectives of the Scheme will be achieved.
- b) As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down
- c) Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the scheme.
- d) Reliance Equity Opportunities Fund is only the name of the Scheme and does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- e) The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond their initial contribution of Rs.1 lakh made by it towards the setting up of the Mutual Fund and such other accretions and additions to the corpus.
- f) The present scheme is not a guaranteed or assured return scheme. The Mutual Fund is not guaranteeing or assuring any dividend. The Mutual Fund is also not assuring that it will make periodical dividend distributions, though it has every intention of doing so. All dividend distributions are subject to the availability of distributable surplus of the Scheme.

2. SCHEME SPECIFIC RISK FACTORS

a) Risks associated with investing in Equities

The Scheme being an equity scheme will be affected by the risks associated with the equity market.

Equity and Equity related instruments on account of its volatile nature are subject to price fluctuations on daily basis. The volatility in the value of the equity and equity related instruments is due to various micro and macro economic factors affecting the securities markets. This may have adverse impact on individual securities /sector and consequently on the NAV of Scheme.

The inability of the Scheme to make intended securities purchases due to settlement problems, could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the schemes portfolio may result, at times, in potential losses to the scheme, should there be a subsequent decline in the value of the securities held in the schemes portfolio.

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments. This may impact the ability of the unit holders to redeem their units. In view of this, the Trustee has the right, in its sole discretion to limit redemptions (including suspending redemptions) under certain circumstances.

The AMC may invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio as these unlisted securities are inherently illiquid in nature and carry larger liquidity risk as compared to the listed securities or those that offer other exit options to the investors.

Investments in equity and equity related securities involve high degree of risks and investors should not invest in the Scheme unless they can afford to take the risk of losing their investment.

b) Risks associated with investing in Bonds

Investment in Debt is subject to price, credit, and interest rate risk.

The NAV of the Scheme may be affected, inter alia, by changes in the market conditions, interest rates, trading volumes, settlement periods and transfer procedures.

Corporate debt securities are subject to the risk of an issuer's inability to meet interest and principal payments on its debt obligations (credit risk). Debt securities may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of the creditworthiness of the issuer, among others (market risk). The Investment Manager will endeavor to manage credit risk through in-house credit analysis. The Scheme may also use various hedging products from time to time, as are available and permitted by SEBI, to attempt to reduce the impact of undue market volatility on the Scheme's portfolio.

The NAV of the Scheme's Units, to the extent that the Scheme is invested in fixed income securities, will be affected by changes in the general level of interest rates. When interest rates decline, the value of a portfolio of fixed income securities can be expected to rise. Conversely, when interest rates rise, the value of a portfolio of fixed income securities can be expected to decline

Investing in Bonds and Fixed Income securities are subject to the risk of an Issuer's inability to meet principal and interest payments obligation (credit risk) and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk).

The timing of transactions in debt obligations, which will often depend on the timing of the Purchases and Redemptions in the Scheme, may result in capital appreciation or depreciation because the value of debt obligations generally varies inversely with the prevailing interest rates.

Interest Rate Risk: As with all debt securities, changes in interest rates will affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of longer-term securities generally fluctuate more in response to interest rate changes than do shorter-term securities. Interest rate movements in the Indian debt markets can be volatile leading to the possibility of large price movements up or down in debt and money market securities and thereby to possibly large movements in the NAV.

Liquidity or Marketability Risk: This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market.

Credit Risk: Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the fixed income security (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk debentures are sold at a yield spread above those offered on Treasury securities, which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default.

Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme or from maturities in the Scheme are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk refers to the fall in the rate for reinvestment of interim cashflows.

Risks associated with various types of securities

	CREDIT RISK	LIQUIDITY RISK	PRICE RISK
Listed	Depends on credit quality	Relatively Low	Depends on duration of instrument
Unlisted	Depends on credit quality	Relatively High	Depends on duration of instrument
Secured	Relatively low	Relatively Low	Depends on duration of instrument
Unsecured	Relatively high	Relatively High	Depends on duration of instrument
Rated	Relatively low and depends on the rating	Relatively Low	Depends on duration of instrument
Unrated	Relatively high	Relatively High	Depends on duration of instrument

Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme’s risk may increase or decrease depending upon its investment pattern e.g. corporate bonds, carry a higher level of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.

c) Risks associated with investing in foreign Securities

The Fund may invest in overseas debt / equities / ADR’s / GDR’s with the approval of RBI/SEBI, subject to such guidelines as may be issued by RBI/SEBI. The net assets, distributions and income of the scheme may be affected adversely by fluctuations in the value of certain foreign currencies relative to the Indian Rupee to the extent of investments in these securities. Repatriation of such investment may also be affected by changes in the regulatory and political environments. The scheme’s NAV may also be affected by a fluctuation in the general and specific level of interest rates internationally, or the change in the credit profiles of the issuers.

d) Risk associated with investing in Derivatives

Valuation Risk

The risk in valuing the Debt & Equity derivative products due to inadequate trading data with good volumes. Derivatives with longer duration would have higher risk viz a viz the shorter duration derivatives.

Mark to Market Risk

The day-to-day potential for an investor to experience losses from fluctuations in underlying stock prices and derivatives prices.

Systematic Risk

The risk inherent in the capital market due to macro economic factors like Inflation, GDP, Global events.

Liquidity Risk

The risk stemming from the lack of availability of derivatives products across different maturities and with different risk appetite.

Implied Volatility

The estimated volatility of an underlying security’s price and derivatives price.

Interest Rate Risk

The risk stemming from the movement of Interest rates in adverse direction. As with all the debt securities, changes in the interest rates will affect the valuation of the portfolios.

Counterparty Risk (Default Risk)

Default risk is the risk that losses will be incurred due to the default by the counterparty for over the counter derivatives.

System Risk

The risk arising due to failure of operational processes followed by the exchanges and OTC participants for the derivatives trading.

Risk attached with the use of derivatives

RNLAM may use various derivative products, from time to time, for purposes of hedging and portfolio rebalancing in an attempt to protect the value of the portfolio and enhance Unit holder’s interest of the Scheme. As and when the schemes trade in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives

require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counter party”) to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Also, the market for derivative instruments is nascent in India.

e) Risk Associated with Securitised Debt

The Scheme may invest in Securitised debt.

As with any other debt instrument, the following risk factors have to be taken into consideration while investing in PTCs:

- i) Credit Risk : Since most of the PTCs are drawn from a cherry picked pool of underlying assets, the risk of delay / default due to poor credit quality is low. Further more most of the PTCs enjoy additional cashflow coverage in terms of subordination by another lower class of PTCs or in terms of excess cash collateralisation.
- ii) Liquidity Risk: Since the maturity of the PTCs will be in line with the maturity of the FMP, the risk arising from low secondary market liquidity of such instruments is low.
- iii) Price Risk / Interest Rate Risk : The price risk of these instruments shall be in line with the maturity / duration of such instruments. However given the fact that these instruments will have a maturity profile upto 2 years, the duration risk is relatively less.
- iv) Domestic Securitised debt can have different underlying assets and these assets have different risk characteristics. These may be as given in the following example:

Security 1 -Backed by receivables of personal loans originated by XYZ Bank

Specific Risk Factors: Loss due to default and/or payment delay on Receivables, Premature Termination of Facility Agreements, Limited loss cover, Delinquency and Credit Risk, Limited Liquidity and Price Risk, Originator/Collection Agent Risk, Bankruptcy of the Originator, Co-mingling of funds

Security2 - Senior Series Pass Through Certificates backed by commercial vehicles and two-wheeler loan and loan receivables from ABC Bank Limited

f) Risk associated with Short Selling & Securities Lending

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. In case the Scheme undertakes stock lending under the Regulations, it may, at times be exposed to counter party risk and other risks associated with the securities lending. Unitholders of the Scheme should note that there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

Short-selling is the sale of shares that the seller does not own at the time of trading. Instead, he borrows it from someone who already owns it. Later, the short seller buys back the stock he shorted and returns the stock to close out the loan. If the price of the stock has fallen, he can buy the stock back for less than he received for selling it and profits from it (the difference between higher short sale price and the lower purchase price). However, Short positions carry the risk of losing money and these losses may grow theoretically unlimited if the price increases without limit and shall result into major losses in the portfolio.

g) Risk factors associated with repo transactions in corporate bonds -

- o The market for the aforesaid product is over the counter (OTC) and illiquid. Hence, repo obligations cannot be easily sold to other parties. If a counterparty fails, the scheme would have to take recourse to the collateral provided. If a counterparty fails to repay and the value of the collateral falls beyond the haircut, then the Scheme would be exposed to a loss of interest or principal
- o Further, if the Scheme needs to take recourse to the debt securities provided as collateral, and the issuer of the debt securities makes a default, the scheme may lose the whole, or substantial portion of the amount. This risk is somewhat mitigated by the fact that only bonds which have credit rating of AA and above can be accepted as collateral for repo transactions.

h) Other Scheme Specific Risk factors

- (i) The liquidity of the Scheme's investments may be inherently restricted by trading volumes, settlement periods and transfer procedures. In the event of an inordinately large number of redemption requests, or of a re-structuring of the Scheme's investment portfolio, these periods may become significant. Please read the Sections of this Scheme Information Document entitled “**Special Considerations**” and “**Right to Limit Redemptions**” thereunder.
- (ii) Although, the objective of the Fund is to generate optimal returns, the objective may or may not be achieved. The investors may note that if the AMC/Investment Manager is not able to make right decision regarding the timing of increasing exposure in debt securities in times of falling equity market, it may result in negative returns. Given the nature of scheme, the portfolio turnover ratio may be on the higher side and the AMC may change the full portfolio commensurate with the investment decisions and Asset Allocation of the Scheme. At times, such churning of portfolio may lead to losses due to subsequent negative or unfavorable market movements.

- (iii) The tax benefits described in this Scheme Information Document are as available under the present taxation laws and are available subject to relevant conditions. The information given is included only for general purpose and is based on advice received by the AMC regarding the law and practice currently in force in India and the Unit holders should be aware that the relevant fiscal rules or their interpretation may change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of an investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Unit holder is advised to consult his / her own professional tax advisor.

Risk factor associated with overseas investment:

Subject to necessary approvals and within the investment objectives of the Scheme, the Scheme may invest in overseas markets which carry a risk on account of fluctuations in foreign exchange rates, nature of securities market of the country concerned, repatriation of capital due to exchange controls and political circumstances.

- (i) To the extent that the assets of the schemes will be invested in securities denominated in foreign currencies, the Indian rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian rupee (if Indian rupee appreciates against these foreign currencies). The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls or political circumstances as
- (ii) well as the application to it of other restrictions on investment. The scheme may have to pay applicable taxes on gains from such investment.
- (iii) As regards foreign equity securities that are traded on exchanges that are not located in India basis of valuation will depend on the time zone of the respective country. For exchanges located in countries, with time zone earlier than India, the NAV will be calculated based on the closing price of the foreign equity security and the prevailing exchange rate on that date. For exchanges located in countries, with time zone later than India, the NAV will be calculated based on the closing price of the foreign equity security and the prevailing exchange rate of the previous date.
- (iv) Subject to the Regulations, the investments may be in securities which are listed or unlisted, secured or unsecured, rated or unrated, and acquired through secondary market purchases, RBI auctions, open market sales conducted by RBI etc., Initial Public Offers (IPOs), other public offers, placements, rights, offers, negotiated deals, etc
- (v) To avoid duplication of portfolios and to reduce expenses, the Scheme may invest in any other schemes of the Fund to the extent permitted by the Regulations. In such an event, RNLAM will not charge management fees on the amounts of the Schemes so invested, unless permitted by the Regulations.

Additional Risk Factors : The risk associated with underlying stocks remain the same except for the additional risk of fluctuation in the exchange rate of the Indian Rupee vis-à-vis US Dollar – the currency in which GDRs / ADRs are denominated. To manage risks associated with the portfolio, foreign currency and interest rate exposure, the Fund may use / invest in derivatives for efficient portfolio management including hedging and in accordance with the conditions as may be stipulated by SEBI / RBI. The Fund also hereby avers that offshore investments shall be made subject to any / all approvals, as well as the conditions thereof as may be stipulated by SEBI / RBI and provided such investments do not result in expenses to the fund in excess of the ceiling, if any, on the expenses prescribed by SEBI. The expenses to the fund shall be limited to the level which, in the opinion of the Fund, is reasonable and consistent with the costs and expenses attendant to international investing. The Fund may, where necessary, appoint other intermediaries of repute such as advisors, sub-managers, sub-custodian etc. for managing and administering such investments. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings of expenses. The fees and expenses would illustratively include, besides the investment management fee, custody fees and costs, fees of appointed overseas advisors and sub-managers, transaction costs, and overseas regulatory costs.

Specific Risk Factors -

- (i) Credit And Rating Downgrade Risk, Prepayment And Foreclosures Risk for Senior PTC Series, Prepayment And Foreclosures Risk for Senior PTC Series, Servicing Agent Risk, Co-mingling Risk, Bankruptcy of the Seller.
- (ii) The NAV of the scheme to the extent invested in Debt and Money market securities are likely to be affected by changes in the prevailing rates of interest and are likely to affect the value of the Scheme's holdings and thus the value of the Scheme's Units.
- (iii) The AMC may, considering the overall level of risk of the portfolio, invest in lower rated/ unrated securities offering higher yields. This may increase the risk of the portfolio.
- (iv) Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. The AMC may choose to invest in unlisted securities that offer attractive yields. This may increase the risk of the portfolio.
- (v) While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- (vi) Investment decisions made by the AMC may not always be profitable, even though it is intended to generate capital appreciation and maximize the returns by actively investing in equity and equity related securities.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme/Plan shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme/ Plan(s). However, if such limit is breached during the NFO of the Scheme, the Fund will endeavor to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2) (c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme / Plan(s)

shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

Periodical distributions may therefore vary from period to period, based on investment results of the portfolio.

2. Right to limit Purchase of units and/or Right to limit Redemption of units

 - i. Liquidity issues - when market at large becomes illiquid and affecting almost all securities. .

- c. When restriction on redemption is imposed, the following procedure shall be applied:
 - i. No redemption requests upto INR 2 lakh shall be subject to such restriction.
 - ii. Where redemption requests are above INR 2 lakh, AMCs shall redeem the first INR 2 lakh without such restriction and remaining part over and above INR 2 lakh shall be subject to such restriction.

E. WHAT ARE THE INVESTMENT STRATEGIES?

INVESTMENT APPROACH & RISK CONTROL

The Fund will endeavor to continuously analyze the performance of economy and industry, which would be reflected in the investment pattern of the fund. The Fund would seek both value & growth, which are likely to commence from the ongoing structural changes in the government policies, infrastructure spending and continuous global economic reforms which tries to integrate different economies across the globe. The primary approach to stock selection will be through the "Top down approach" viz: Sector --> Industry--> Company.

The top down approach would be focusing on an analysis of any key policy/ regulation changes, changes in infrastructure spending, economic trends/ indicators, and thereby sector wise impact analysis which will then translate into allocation of funds in that sector/ company.

The fund would not only restrict itself to the "Top down Approach" but on a case to case basis will also adopt the "Bottoms up approach" viz: Company --> Industry--> Sector.

This approach would focus on the micro- level analysis of corporate profitability, vision and future business prospects of the company, capital structure, product profile, market share, competitive edge, research and technological advancement, the policy environment and its responsiveness to align itself to such changes.

The above-mentioned investment approaches are only indicative and may undergo a change from time to time keeping in view the market conditions and perception of the Investment Manager thereby.

The fund will, in general invest a significant part of its corpus in equities however pending investments in equities, the surplus amount of the fund should be invested in debt and money market instruments. Also whenever good investment opportunity are not available, or the equity market is not likely to perform in the view of the Fund manager the Fund will reduce its exposure to equity and during that period the surplus asset of the Fund shall be invested in debt and money market instruments. However there is no assurance that all such buying and selling activities would necessarily result in benefit for the Fund. The allocation between debt and equity will be decided based upon the prevailing market conditions, macro economic environment, and the performance of the corporate sector, the equity market and other considerations. At time such churning could lead to higher brokerage and transaction costs.

To achieve its primary objective as mentioned above, the Fund would invest in equity and equity related securities. To achieve its secondary objective, the fund would invest in debt and money market securities. These securities could include:

1. Equity and equity related securities are such instruments like Convertible bonds and debentures and warrants carrying the right to obtain equity shares and derivative instruments.
2. Obligations of Indian Companies (both public and private sector) including term deposits with the banks as permitted by SEBI/ RBI from time to time and developmental financial institutions
3. Certificate of Deposits (CDs)
4. Commercial paper (CPs)
5. In Securitised Debt upto 25% of the corpus. No investments shall be made in foreign securitised debt.
6. The non convertible part of convertible securities
7. Any other domestic fixed income securities
8. ADRs / GDRs issued by Indian companies, subject to guidelines issued by RBI / SEBI
9. Money market instruments permitted by SEBI/ RBI, having maturities upto 1 year in call money market instruments as may be provided by the RBI to meet the liquidity requirements
10. Derivatives like Interest rate swaps, Forward Rate agreements, stock futures, index futures, and other such instruments as permitted by RBI /SEBI
11. Any other instruments as allowed by the Regulations from time to time.

The Fund may also enter into "Repo", "Stock Lending" or such other transactions as may be allowed to Mutual Funds from time to time.

Subject to the Regulations, the investments may be in securities which are listed or unlisted, secured or unsecured, rated or unrated, having variable maturities, and acquired through secondary market purchases, RBI auctions, open market sales conducted by RBI etc., Initial Public Offers (IPOs), other public offers, placements, rights, offers, negotiated deals, etc

The Scheme may also enter into repurchase and reverse repurchase obligations in all securities held by it as per the guidelines and Regulations applicable to such transactions. Further the Scheme intends to participate in securities lending as permitted under the Regulations.

Risk Control

The portfolio shall be structured so as to keep risk at acceptable levels. This shall be done through various measures including:

1. Broad diversification of portfolio
2. Ongoing review of relevant market, industry, sector and economic parameters
3. Investing in companies which have been researched
4. Investments in debentures and bonds will usually be in instruments which have been assigned investment grade ratings by any approved rating agency

RNLAM may, from time to time, review and modify the Scheme's investment strategy if such changes are considered to be in the best interests of the unitholders and if market conditions warrant it. Investments in securities and instruments not specifically mentioned earlier may also be made, provided they are permitted by SEBI/RBI and approved by the Trustee. However, such investments shall be made keeping in view the Fundamental Attributes of the Scheme.

Investment Philosophy and Focus

India today is the world's largest democracy with a vibrant electorate, active Judiciary and civil society groups, and a fiercely independent media.

It is the Fund's view India's growth model promises more stable, sustainable expansion and bigger returns for the investors. There exists a very positive view on the sectors like Agriculture, Manufacturing and Service, which contribute, substantially to our GDP. In our view all these three sectors simultaneously are looking quite attractive and bullish.

The Indian economy has performed impressively over the past two decades. A major fiscal and balance of payment crisis led to a package of radical economic reforms in 1991. Since then, India has undertaken far-reaching economic reforms of deregulation and liberalization, which has unleashed the enormous growth potential of the economy and a powerful entrepreneurial force. The reform measures included a greater private sector role in India's development by improving the investment and tax regimes, dismantling industrial licensing, opening infrastructure to private investment, reforming public enterprises and the financial sector, and reducing price controls. The package also initiated the liberalisation of foreign trade and exchange regimes.

The consumers and public have realized the benefits of liberalization through increase in the choice and quality of products and decrease in prices. The business and industry have also adjusted themselves with the liberalization and globalization. The unprecedented high level of foreign exchange reserves, upward trend in FDI inflows and the general growth of the economy has given more confidence and encouragement to the policy-makers to further accelerate its economic reforms and liberalization process. Both at the central and state levels and across political parties, in general, there is consensus on further economic liberalization.

We are of the view that the reforms program and the market-oriented policies of the Government are irreversible. The government is committed to economic reforms with a human face that stimulates growth, investment and employment. The government has recognized that further reforms are needed in agriculture, industry, services and infrastructure.

Government has divested its stake in public sector undertakings in the light of the redefinition of its role from being a provider of goods and services to that of a policy-maker and facilitator. Between 1991 and 2003, the Government has privatized assets worth US\$ 10 billion including \$ 3.5 billion in fiscal 2003-2004. The economic reform process involves structural changes in various sectors and companies like:

- Encouraging private participation and changing the ownership model in favour of private participants
- De-regulation of pricing
- Increased spending by government on the infrastructural projects
- Reforming public enterprises and the financial sector

These planned steps will accelerate the pace of GDP growth and would encourage investments in form of increased FDIs/ and private investments. This will result in increase in investment capital and would finally result in the overall value creation in the economy. This will be reflected in increased valuations of the individual companies, increased corporate profitability and better market capitalization. These changes will implant greater confidence in the minds of the domestic and foreign investors.

Exposure to foreign securities: The scheme may have an exposure of upto 90% of its net assets in foreign securities. The AMC with a view to protecting the interests of the investors may increase exposure in foreign securities upto 100% as deemed fit from time to time. However, the exposure in foreign securities would not exceed the maximum amount permitted from time to time. Boards of asset management companies (AMCs) and trustees shall exercise due diligence in making investment decisions as required under Regulation 25 (2). They shall make a detailed analysis of risks and returns of investment in foreign securities, comparing them with likely yields of the securities available in domestic markets and how these investments would be in the interest of investors. Investment must be made in liquid actively traded securities.

Boards of AMCs and trustees may prescribe detailed parameters for making such investments which may include identification of countries, country rating, country limits, etc. They shall satisfy themselves that the AMC has experienced key personnel, research facilities and infrastructure for making such investments. Other specialised agencies and service providers associated with such investments e.g. custodian, bank, advisors, etc should also have adequate expertise and infrastructure facilities. Their past track record of performance and regulatory compliance record, if they are registered with foreign regulators, may also be considered. Necessary agreements may be entered into with them as considered necessary.

All investment decisions shall be recorded in accordance with SEBI circular dated July 27, 2000.

Investment in overseas financial assets: SEBI vide its circular no. SEBI/IMD/CIR No. 7/104753/07 dated September 26, 2007 and Circular No. SEBI/IMD/CIR No.2/122577/08 dated April 08, 2008 has issued guidelines pertaining to investments in overseas financial assets. Accordingly all the investments in ADR/GDR and foreign securities shall be made in compliance with the above referred circular. It is the investment manager's belief that overseas securities offer new investment and portfolio diversification opportunities into multi-market and multi-currency products. However, such investments also entail additional risks. Offshore investment will be made subject to any/ all approvals / conditions thereof as may be stipulated by SEBI/ RBI/ other regulatory authorities. The Fund shall appoint a dedicated fund manager for the purpose of investment in overseas financial assets as prescribed in the aforesaid SEBI circular. The fund may, where necessary, appoint other intermediaries of repute as advisors, subcustodians, etc. for managing and administering such investments. The fees and expenses of such appointment would be part of the recurring expenses of the scheme. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings of expenses. The fees and expenses would include, besides the investments management fees, custody fees and costs, fees of appointed advisors and sub managers, transaction costs and overseas regulatory costs. Investment in foreign securities offers more opportunities and diversification for investments. Investors may note that the scheme shall not invest in foreign debt securities.

Advantages and Risks attached with investments in overseas financial assets:

It is AMC's belief that the investment in ADRs/GDRs/overseas securities offer new investment and portfolio diversification opportunities into multi-market and multi-currency products. However, such investments also entail additional risks. Such investment opportunities may be pursued

by the AMC provided they are considered appropriate in terms of the overall investment objectives of the schemes. Since the Scheme would invest only partially in ADRs/ GDRs/overseas securities, there may not be readily available and widely accepted benchmarks to measure performance of the Scheme.

We have seen that different economies perform differently at various points in time. Therefore in order to maximize the gains to the investors by allocating resources to economies which are doing better than ours and also to diversify the risk arising out of concentrated investments in just one country, we may propose to invest in foreign securities in compliance to the regulations from time to time.

1. To manage risks associated with foreign currency and interest rate exposure, the Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/RBI from time to time.
2. To the extent that the assets of the Schemes will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by the changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital also may be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of the other restrictions on investment.
3. Offshore investments will be made subject to any/all approvals, conditions thereof as may be stipulated by SEBI/RBI and provided such investments do not result in expenses to the Fund in excess of the ceiling on expenses prescribed by and consistent with costs and expenses attendant to international investing. The Fund may, wherever necessary, appoint other intermediaries of repute as advisors, custodian/sub-custodians etc. for managing and administering such investments.
4. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings of expenses. The fees and expenses would illustratively include, besides the investment management fees, custody fees and costs, fees of appointed advisors and sub-managers, transaction costs, and overseas regulatory costs.

In accordance with the Regulations and applicable guidelines, the Trustees have given permission to the Fund to engage in stock lending activities. Accordingly, the Scheme may lend securities to the extent of its entire portfolio of scheme to any borrower through an Approved Intermediary. The Securities will be lent by the Approved Intermediary against collateral received from borrower, for a fixed period of time, on expiry of which the securities lent will be returned by the borrower.

It may be noted that this activity would have the inherent probability of collateral value drastically falling in times of strong downward market trends, resulting in inadequate value of collateral until such time as that diminution in value is replenished by additional security. It is also possible that the borrowing party and /or the approved intermediary may suddenly suffer severe business setback and become unable to honour its commitments. This along with a simultaneous fall in value of collateral would render potential loss to the Scheme. Besides, there can also be temporary illiquidity of the securities that are lent out and the scheme may not be able to sell such lent out securities.

Investors are requested to take note that in case the scheme invests in securitized debt, following shall be applicable:

Disclosures with respect to securitized debt

1. **How the risk profile of securitized debt fits into the risk appetite of the scheme**

Securitized debt is a form of conversion of normally non-tradable loans to transferable securities. This is done by assigning the loans to a

special purpose vehicle (a trust), which in turn issues Pass-Through-Certificates (PTCs). These PTCs are transferable securities with fixed income characteristics. The risk of investing in securitized debt is similar to investing in debt securities. However it differs in following two majorly respects :-

Typically the liquidity of securitized debt is less than similar debt securities. However, this is expected to change as SEBI has issued its guidelines on listing of securitized instrument and going forward we expect more issuance of listed securitized debt.. Currently, the fund manager normally buys these with the view to hold them till maturity. For the close ended scheme, the average tenor of the securitized debt would not exceed maturity of the Scheme / Plan / Fund. For open ended scheme, average maturity of the securitized debt will be in accordance with the investment time horizon of such scheme, opportunities available in the market and interest rate views of the investment team.

For certain types of securitized debt (backed by mortgages, personal loans, credit card debt, etc.), there is an additional pre-payment risk. Pre-payment risk refers to the possibility that loans are repaid before they are due, which may reduce returns if the re-investment rates are lower than initially envisaged. The fund manager price the securitized debt accordingly to compensate for reinvestment risk.

Because of these additional risks, securitized debt typically offers higher yields than debt securities of similar credit rating and maturity. If the fund manager judges that the additional risks are suitably compensated by the higher returns, he may invest in securitized debt according to the nature (open ended / close ended) of the scheme.

2. Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc.

Originators have been broadly categorized as follows:

- i. PSU Banks;
- ii. Private Banks;
- iii. NBFC's with asset size of Rs. 1,000 crores and above; and
- iv. NBFC's with asset size of below Rs. 1,000 crores.

Before the assessment of the structure is undertaken, the originators/ underlying issuers are evaluated on the following parameters:

- Track record - good track record of the originators/ underlying issuers or its group companies.
- Willingness to pay - credible and strong management team.
- Ability to pay – good financials and business profile.
- Risk appraisal capabilities - strong and well defined risk assessment processes
- Business risk assessment of the originators based on the following factors:
 - Outlook for the economy (domestic and global)
 - Outlook for the industry
 - Company specific factors

In addition a detailed review and assessment is done including interactions with the company as well as the credit rating agency. Typically we would avoid investing in securitization transaction (without specific risk mitigant strategies / additional cash/security collaterals/ guarantees) if we have concerns on the following issues regarding the originator / underlying issuer:

- Default track record/ frequent alteration of redemption conditions / covenants;
- Very High leverage ratios of the ultimate borrower (for single-sell downs) - both on a standalone basis as well on a consolidated level;
- Very High proportion of reschedulement of underlying assets of the pool or loan, as the case may be;
- Very High proportion of overdue assets of the pool or the underlying loan, as the case may be;
- Poor reputation in market;
- Insufficient track record of servicing of the pool or the loan, as the case may be;
- The degree of NPAs of the company being very high than the industry trends.

Further , investments in securitized debt will be done in accordance with the investment restrictions specified under the Regulations / this Scheme Information Documents which would help in mitigating certain risks. Currently, as per the Regulations, the Scheme cannot invest more than 15% of its net assets in debt instruments (irrespective of residual maturity) issued by a single issuer which are rated not below investment grade by a credit rating agency . Such investment limit may be extended to 20% of the net assets of the Scheme with the prior approval of the Board of Trustees.

3. Risk mitigation strategies for investments with each kind of originator

An analysis of the originator / Issuer is especially important in case of retail loans as the size and reach affects the credit quality and servicing of the securitized instrument. In case of securitization involving single loans or a small pool of loans, the credit risk of the underlying borrower is analyzed. In case of diversified pools of loans, the overall characteristic of the loans is analyzed to determine the credit risk. The credit analyst looks at seasoning (i.e. how long the loan has been with the originator before securitization) as one way of evaluating the performance potential of the PTC. Securitization transactions may include some risk mitigants (to reduce credit risk). These may include interest subvention (difference in interest rates on the underlying loans and the PTC serving as margin against defaults), overcollateralization (issue of PTCs of lesser value than the underlying loans, thus even if some loans default, the PTC continues to remain protected), presence of an equity / subordinate tranche (issue of PTCs of differing seniority when it comes to repayment - the senior tranches get paid before the junior tranche) and / or guarantees.

Investments in securitized debt will be done based on the assessment of the originator which is carried out by the Fixed Income team. In order to mitigate the risk at the issuer/originator level, the Fixed Income team will consider various factors which will include:

- size and reach of the issuer /originator
- Set up of the organization structure of the issuer /originator
- the infrastructure and follow-up mechanism of the issuer /originator

- the issuer / originator's track record in that line of business
- quality of information disseminated by the issuer/originator; and
- the Credit enhancement for different type of issuer/originator

Table 1: illustrates the framework that will be applied while evaluating investment decision relating to a securitization transaction:

"Characteristics/Type of Pool"	"Mortgage Loan "	Commercial Vehicle and Construction Equipment	CAR	2Wheeler	Micro Finance	Personal Loans	Single Loan Sell Downs / Others

Accordingly, our investment strategy, risk mitigation measures and other information contained herein may change in response to the same.

4. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

In retail securitized debt investments, we will invest majorly in asset backed pools such as Medium and Heavy Commercial Vehicles, Light Commercial Vehicles (LCV), Cars, and Construction Equipment etc. Where we invest in Single Loan Securitization, as the credit is on the underlying issuer, we focus on the credit review of the borrower. A credit analyst sets up limit for various issuers based on independent research taking into account their historical track record, prevailing rating and current financials. In addition to the framework as per the table above, we also take into account following factors, which are analyzed to ensure diversification of risk and measures identified for less diversified investments:

- Size of the loan: In retail loans securitisation, the major risk diversification is achieved on account of granularity i.e. higher number of contracts available. However, excessive reliance on very small ticket size should be avoided as it may result in difficult and costly recoveries.
- Original maturity of the pool: Ideal original maturity of the contract varies for different retail loans. For Cars / Commercial Vehicles / Construction Equipment, it lies around 60 months while for mortgage, it lies around 240 months. For microfinance loans, it lies around 12 months. Lower original maturity for asset backed retail loans means faster buildup of borrowers' equity into the asset as well as his higher borrowing capacity.
- Loan to Value Ratio: Loan to Value ratio means value of the loan taken compared to value of the assets offered as security. In case of secured loan, higher Loan to Value ratio means higher probability of losses in case asset is repossessed and sold in case of delinquency. We prefer contracts with lower loan to value ratio than higher loan to value ratio.
- Seasoning of the pool: Higher the time period the contracts have remained with the originator / issuer, the lower is the default risk on such contracts. This is because of the higher buildup of borrower's equity into the asset as the time gradually passes. We prefer higher seasoned contracts than lower seasoned contracts.
- Current performing pools: We normally ensure that majority of the contracts in the pools are current to reduce default rate.. The rationale here being, as against current performing contract, the overdue contracts are certainly in higher risk category.
- Geographical Distribution: Regional/state/ branch distribution is preferred to avoid concentration of assets in a particular region/state/ branch.
- Default Rate Distribution: We prefer branches/ states where default rate is less than branches/ states where default rates are high to avoid concentration of assets from poor performing regions.
- Risk Tranching: Typically, we would avoid investing in mezzanine debt or equity of Securitized debt in the form of sub ordinate tranche, without specific risk mitigant strategies / additional cash / security collaterals/ guarantees, etc.
- Credit Enhancement Facility: We prefer credit enhancement which is in form of cash / bank guarantee than in the form of over-collateralization of the pool / excess interest spread available in the pool. The rationale here being, as against cash collateral, excess interest spread / overcollateralization collateral fluctuate in line with performance of the pool. When the performance of the pool deteriorates, there is lesser current collateral available on account of over- collateralization of the pool / excess interest spread available than the original envisaged one.
- Liquid Facility: In many retail asset classes like commercial vehicle, there can be some delay in payment from borrower due to pressure on its working capital. However, this delay usually does not go beyond 5-6 months as in the meantime he receives payment

from his customers and clear his overdue portion of the loan. In that kind of asset classes, we prefer pool with liquid facility as it balances the intermittent liquidity requirement of the pool.

- Structure of the Pool: Structure of a transaction can either be at par or at a premium, depending on whether the pool principal is sold at par or at a premium to investors. We prefer pool where it is sold on par basis.

5. Minimum retention period of the debt by originator prior to securitization

For investments in PTCs, where the assets have been pooled, the minimum retention period for each of the contract should be 1 month with an average tenor of up to 24 months and 2 months for contracts with an average tenor of more than 2 years. For overall minimum retention period, please refer to Table 1.

6. Minimum retention percentage by originator of debts to be securitized

PI refer to Table 1 which illustrates additional collaterals taken against each type of asset class, which is preferred over the minimum retention percentage by the originator of the loan. The rationale is that collateral is available at all points of time and is available at all points of times in case of any fructification of any probable losses where retention percentage keeps running down as time passes and may not be fully available in case of any fructification of any probable losses

7. The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

Investments made by the scheme in any asset are done based on the requirements of the scheme and is in accordance with the investment objectives and the asset allocation pattern of a fund. All Investments are made entirely at an arm's length basis with no consideration of any existing / consequent investments by any party related to the transaction (originator, issuer, borrower etc.). The robust credit process ensures that there is no conflict of interests when a scheme invests in securitized debt of an originator and the originator in turn makes investment in that particular scheme.

There might be instances of Originator investing in the same scheme but both the transactions are at arm's length and avoid any conflict of interest. In addition to internal controls in the fixed income investment process, there is regular monitoring by the risk management group and investment committee. Normally the issuer who is securitizing instrument is in need of money and is unlikely to have long term surplus to invest in mutual fund scheme.

Furthermore, there is clear cut segregation of duties and responsibilities with respect to Investment function and Sales function. Investment decisions are being taken independently based on the above mentioned parameters and investment by the originator in the fund is based on their own evaluation of the fund vis a vis their investment objectives .

8. In general, the resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt.

The risk assessment process for securitized debt, as detailed in the preceding paragraphs, is same as any other credit. The investments in securitized debt are done after appropriate research by credit analyst. The ongoing performance of the pool is monitored to highlight any deterioration in its performance.

The resources for and mechanisms of individual risk assessment with the AMC for monitoring investment in securitized debt are as follows:

- Fixed Income Team - Risk assessment and monitoring of investment in Securitised Debt is done by a team comprising of Credit Analyst, Head of Fixed Income and Head of Credit Research
- In addition to internal controls in the fixed income investment process, there is regular monitoring by the risk management group and investment committee.
- Ratings are monitored for any movement - Based on the the interaction with the credit rating agency and their performance report, ratings are being monitored accordingly.
- Wherever the funds portfolio is disclosed, the AMC may give a comprehensive disclosure of Securitised debt instruments held in line with SEBI requirement.

Note: The information contained herein is based on current market conditions and may change from time to time based on changes in such conditions, regulatory changes and other relevant factors. Accordingly, our investment strategy, risk mitigation measures and other information contained herein may change in response to the same.

TRADING IN DERIVATIVES

The Scheme may take derivatives position based on the opportunities available subject to the guidelines issued by SEBI from time to time and in line with the overall investment objective of the Scheme. These may be taken to hedge the portfolio, rebalance the same or to undertake any other strategy as permitted under the SEBI Regulations.

The following information provides a basic idea as to the nature of the derivative instruments proposed to be used by the Fund and the benefits and risks attached there with.

i) Interest Rate Swaps and Forward rate Agreements

Benefits : Bond markets in India are not very liquid. Investors run the risk of illiquidity in such markets. Investing for short-term periods for liquidity purposes has its own risks. Investors can benefit if the Fund remains in call market for the liquidity and at the same time take advantage of fixed rate by entering into a swap. It adds certainty to the returns without sacrificing liquidity.

Illustration : The following are illustrations how derivatives work:

In the above illustration, Basic Details: Fixed to floating swap

Notional Amount: Rs. 5 Crores

Benchmark: NSE MIBOR

Deal Tenor: 3 months (say 91 days)

Documentation: International Swaps & Derivatives Association (ISDA).

Let us assume the fixed rate decided was 10%.

At the end of three months, the following exchange will take place:

Counter party 1 pays: compounded call rate for three months, say 9.90%

Counter party 2 pays fixed rate: 10%

In practice, however, the difference of the two amounts is settled. Counter party 2 will pay:

Rs 5 Crores * 0.10% * 91/365 = Rs. 12,465.75

Thus the trade off for the Fund will be the difference in call rate and the fixed rate payment and this can vary with the call rates in the market. Please note that the above example is given for illustration purposes only and the actual returns may vary

depending on the terms of swap and market conditions.

ii) Index Futures:

Benefits

- Investment in Stock Index Futures can give exposure to the index without directly buying the individual stocks. Appreciation in Index stocks can be effectively captured through investment in Stock Index Futures.
- The Fund can sell futures to hedge against market movements effectively without actually selling the stocks it holds.

The Stock Index futures are instruments designed to give exposure to the equity market indices. The Stock Exchange, Mumbai and The National Stock Exchange have started trading in index futures of 1, 2 and 3-month maturities. The pricing of an index future is the function of the underlying index and interest rates.

Illustration

Spot Index: 1070

1 month Nifty Future Price on day Rs. 1: 1075

Fund buys 100 lots

Each lot has a nominal value equivalent to 200 units of the underlying index

Let us say that on the date of settlement, the future price = Closing spot price = Rs. 1085

Profits for the Fund = (Rs. 1085 - Rs. 1075) * 100 lots * 200 = Rs 200,000

Please note that the above example is given for illustration purposes only.

The net impact for the Fund will be in terms of the difference between the closing price of the index and cost price (ignoring margins for the sake of simplicity). Thus, it is clear from the example that the profit or loss for the Fund will be the difference of the closing price (which can be higher or lower than the purchase price) and the purchase price. The risks associated with index futures are similar to the one with equity investments. Additional risks could be on account of illiquidity and hence mispricing of the future at the time of purchase.

iii) Buying Options:

Benefits of buying a call option:

Buying a call option on a stock or index gives the owner the right, but not the obligation, to buy the underlying stock / index at the designated strike price. Here the downside risks are limited to the premium paid to purchase the option.

Illustration

For example, if the fund buys a one-month call option on Satyam Computers at a strike of Rs. 150, the current market price being say Rs.151. The fund will have to pay a premium of say Rs. 15 to buy this call. If the stock price goes below Rs. 150 during the tenure of the call, the fund avoids the loss it would have incurred had it straightaway bought the stock instead of the call option. The fund gives up the premium of Rs. 15 that has to be paid in order to protect the fund from this probable downside. If the stock goes above Rs. 150, it can exercise its right and own Satyam Computers at a cost price of Rs. 150, thereby participating in the upside of the stock.

Benefits of buying a put option

Buying a put option on a stock originally held by the buyer gives him/her the right, but not the obligation, to sell the underlying stock at the designated strike price. Here the downside risks are limited to the premium paid to purchase the option.

Illustration

For example, if the fund owns Satyam computers and also buys a three month put option on Satyam Computers at a strike of Rs. 150, the current market price being say Rs.151. The fund will have to pay a premium of say Rs. 12 to buy this put. If the stock price goes below Rs. 150 during the tenure of the put, the fund can still exercise the put and sell the stock at Rs. 150, avoiding therefore any downside on the stock below Rs. 150. The fund gives up the fixed premium of Rs. 12 that has to be paid in order to protect the fund from this probable downside. If the stock goes above Rs. 150, say to Rs. 170, it will not exercise its option. The fund will participate in the upside of the stock, since it can now sell the stock at the prevailing market price of Rs. 170.

The Scheme will comply with provisions specified in SEBI Circular No. Cir/IMD/DF/11/2010 dated August 18, 2010 related to overall exposure limits as stated below:

- The cumulative gross exposure through equity, debt and derivative positions should not exceed 100% of the net assets of the scheme.
- Mutual Funds shall not write options or purchase instruments with embedded written options.

- (iii) The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.
- (iv) Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
- (v) Exposure due to hedging positions may not be included in the above mentioned limits subject to the following:
 - a. Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - b. Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point (i).
 - c. Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - d. The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
- (vi) Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point (i).
- (vii) Definition of Exposure in case of Derivative Positions: Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts.

- (viii) Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.

The AMC retains the right to enter into such derivative transactions as may be permitted by the Regulations from time to time. For risks associated with investments in derivatives investors are requested to refer to Scheme Specific Risk Factors of this Scheme Information Document.

The AMC retains the right to enter into such derivative transactions as may be permitted by the applicable regulations from time to time.

PORTFOLIO TURNOVER POLICY:

Given the nature of the scheme, the portfolio turnover ratio may be very high and AMC may change the portfolio according to Asset Allocation, commensurate with the investment objectives of the scheme. The effect of higher portfolio turnover could be higher brokerage and transaction costs.

G. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

S&P BSE 100 Index

Considering the investment in the fund made in equity /equity related securities with the objective of achieving long term growth of capital, we propose to have S&P BSE 100 as a benchmark since majority of the stocks relate to the broader investment philosophy of the fund which is to invest in stocks with potential for future growth and good track record.

15. In case any company has invested more than 5% of the net asset value of a scheme, the investment made by that scheme or by any other scheme of the same Mutual Fund in that company or its subsidiaries, if any, shall be brought to the notice of the Trustees by RNLAM and be disclosed in the half-yearly and annual accounts with justification for such investment provided that the latter investment has been made within one year of the date of the former investment calculated on either side.

7. TRIGGER FACILITY

Under this facility the unit holders may opt for withdrawal/ switch of units to any other plan/ scheme on happening of any one of the following events under trigger option;

A. NAV reaches or crosses a particular value

E.g. NAV reaches or crosses Rs 11.00

If NAV on the date of allotment of investment is less than Rs 11.00, the trigger will be activated when the NAV rises to Rs 11.00 or more on close of any day on which NAV is computed.

If NAV on the date of allotment of investment is more than Rs11.00, the trigger will be activated when the NAV falls to Rs 11.00 or below on close of any day on which NAV is computed

All transactions linked with trigger will be on the basis of the applicable NAV of the transaction day following the day on which NAV reaches, crosses or falls below Rs 11.00

B. Change in the value of units held by unit holders atleast by certain percentage

E.g. Change in the value of Investment by atleast by (+ or - or +/-) 10%

The trigger will be activated when value of the unitholding rises to 10% or more at the close of any day on which the NAV is declared; or The trigger will be activated when value of the unitholding falls by 10% or more at the end of any day on which the NAV is declared;

or The trigger will be activated when value of the unitholding either rises by 10% or more or falls by 10% or more on any day on which the NAV is declared.

C. Date Based Trigger: Investors can now choose any particular date to activate the trigger. Date based trigger facility enables investors to redeem / switch investments from a particular scheme on a pre-determined date to any other eligible open ended scheme offered by Reliance Mutual Fund. The trigger would be activated on the date mentioned by the investor. Trigger will be processed with NAV of the specified date under this facility or with NAV of the subsequent business day if the specified date is a non-business day.

The unit holders can now opt for the following action, on the date of happening of the relevant events/ triggers opted under the trigger facility:

1. Full/ Partial redemption
2. Redemption to the extent of capital appreciation only
3. Full/ Partial switch into other eligible plan/ scheme of RMF
4. Switch of only the appreciation into other plan/ scheme of RMF

Transactions linked with the triggers will be executed at the applicable NAVs for the transaction day following the day on which the trigger situation has arisen. Further all the predetermined events i.e. rise or fall in the NAV upto a particular % or value will be compared with the value of units or NAV prevailing on the date of allotment of units, irrespective of the fact whether the trigger is opted on the date of allotment or subsequently.

For e.g. an investor has invested at Rs 11.00 and opted for full redemption, if NAV appreciates atleast by 10%, trigger will be activated on the transaction day when NAV moves to 12.10 (i.e. 10% more than Rs 11/-) or more.

Trigger facility shall be activated after 7 calendar days of the receipt of trigger request. A trigger once activated will not be reactivated in any other plan/ scheme where the Switch happens or in the same plan which retains a part of the value or in case of normal redemption /switch before the trigger is activated. Triggers will be deactivated on redemption and/or switch and/or pledge of units.

Trigger, thus, acts as a financial planning tool and enables the investor to minimise the losses and timely book profits.

NAV's of the schemes are declared at the close of the business day and hence Value of the unit holders unit holdings based on the end of day NAV will be considered as a base for activating the triggers. Accordingly, all the redemptions/ switches etc will be done on the following transaction day on which the event occurs.

Please note that trigger is an additional facility provided to the unit holders to save the time for completing the redemption/ switch formalities on happening of a particular event. Trigger is not to be conceived as an assurance on part of the Fund that the investor will manage to receive a particular sum of money/ appreciation/ and/or fixed % of sum. Trigger is an event on happening of which the Fund will automatically redeem/ switch units on behalf of the investor on the date of happening of the event. In actual parlance, a trigger will activate an automatic transaction when the event selected for has reached a value greater or less than the specified value (trigger point).

Trigger request is required to be given per transaction by filling in the relevant form. In the event of multiple triggers for a particular transaction, the trigger request will be considered invalid and rejected.

Note: It may be noted that all the withdrawal/ switch of units to Reliance Gold Savings Fund have been termed as Reliance Golden Trigger with effect from May 21, 2011. All other features under these facilities remain unchanged.

RMF / RNLAM reserve the right to introduce, change, modify or withdraw the features available in this facility from time to time.
